

ICP Progress Report - Ivan's Sections (Added Jan 19, 2026)

This document contains all content added to the ICP Progress Report Google Doc.

Section 5.1 - Re-New Website Relaunch: Strengthening Visibility and Positioning

The website relaunch represented one of the first concrete deliverables of the Re-New 2.0 team. At the time of engagement (mid-2025), Re-New had no public digital presence: no logo, no website, no coherent brand identity. The founders had successfully completed Campaign #1, attracting 60 applicants through LinkedIn outreach alone, and were preparing Campaign #2 with an ambitious target of 200+ candidates. The initial brief was straightforward: create a "professional windscreen" to support the upcoming campaign.

From windscreen to strategic asset

Ivan took ownership of the full website workstream, from strategy to execution. Rather than simply building a landing page, the approach began with extensive strategic discussions with Bertrand to frame Re-New's positioning and value proposition. This work involved distilling Re-New's offering into a clear narrative that could resonate with two distinct audiences: entrepreneurs seeking acquisition opportunities and, importantly, business owners considering a sale who might see Re-New as a credible channel for finding qualified successors.

The resulting information architecture, page structure, and all website copy were developed through iterative collaboration with the founding team. Beyond content, a content management system was implemented to enable Bertrand to publish blog articles and rapidly test different messaging approaches without technical dependency.

Deliverables and outcomes

The website (re-new.team) launched in time for Campaign #2 with:

- A complete brand identity including logo and visual language
- Clear value proposition targeting both sides of the marketplace
- Structured information architecture with defined user journeys
- CMS capabilities for content iteration and A/B testing
- Analytics integration for measuring engagement

Strategic learning

Campaign #2 yielded 60 applications rather than the targeted 200+, revealing that a polished "windscreen" alone could not solve the fundamental challenge of candidate acquisition at scale. This outcome proved strategically valuable: it confirmed that Re-New's bottleneck was not brand credibility but the underlying business model mechanics.

This learning directly informed the subsequent pivot toward building a platform that could create sustainable competitive advantage rather than continuing to optimize external marketing assets. The website work thus served both its immediate purpose (enabling Campaign #2) and a diagnostic function (revealing where value creation truly needed to happen).

Section 6.4 - Re-New Platform Setup: Internal Management Tool and Dual-Sided CRM for Repreneur Qualification and Service Delivery

Strategic rationale: Why a platform?

The platform workstream emerged from a core insight: Re-New's advisory work produces something beyond revenue - it produces deeply profiled candidates. Every person who engages with Re-New, whether through the Starter Pack, advisory sessions, or the Re-Lead Track, becomes more legible, more qualified, and ultimately more valuable to M&A partners seeking buyers. Today, this profiling exists in spreadsheets and conversations. The platform transforms it into a scalable asset.

Following Professor Martin Kupp's guidance (January 2026), we explicitly avoided over-engineering. His warning was clear: build something "really rough really quickly and then run the experiments." He shared a cautionary example of a platform that "died because nobody used it" despite being technically well-executed. Our approach therefore prioritizes learning over polish.

Platform as experimentation foundation, not final product

The platform is designed as an internal operational cockpit, not a marketplace or consumer-facing application. Its primary purpose is to enable rapid hypothesis testing around Re-New's monetization model, including learning modules, deal flow visibility, and candidate-partner matching.

From the founders' alignment meeting (January 9, 2026), the strategic positioning was clarified: the platform is an asset that enables premium accompaniment, not a product to be sold directly. Re-New will not sell access to a database; they will sell high-touch advisory services powered by the platform's data and workflow capabilities.

V1 scope and current capabilities

Version 1 replaces the existing Flatchr ATS and manual spreadsheets with a purpose-built system. Current capabilities include:

- **Repreneur lifecycle management:** Tracking candidates from Lead through Qualified to Client status, with full interaction history
- **Two-tier scoring system:** Automated pre-interview scoring based on form responses (Tier 1) combined with manual post-interview behavioral assessment (Tier 2, 1-5 stars)
- **Offer-centric tracking:** Managing Re-New's product offerings (Starter Pack, Deal Flow, Sparring Partner) with conversion tracking between offers
- **Activity logging:** Recording all interactions, interviews, sessions, and key moments per repreneur
- **Pipeline visualization:** Segmented views by status, offer type, maturity level, and geography

The technical foundation is production-ready, built on a modern stack (Next.js, TypeScript) with a data model designed for future extensibility.

What the platform is NOT (in V1)

To maintain focus, several features are explicitly deferred:

- Repreneur self-service login or dashboard (V2)
- Partner/intermediary access to candidate data (V3)
- Learning modules and gamification (V4)
- Anonymized candidate browsing for partners (V3)

Immediate priorities (January-February 2026)

1. **Flatchr migration:** Achieve feature parity and migrate existing candidate data (target: 7-14 days)
2. **Starter Pack launch support:** Track offers made to Campaign 2 candidates, capture responses and objections
3. **PMF measurement enablement:** Build conversion funnel metrics, time-in-stage tracking, and revenue-per-candidate calculations

Risk mitigation approach

The platform development prioritized removing technical risks early. The focus was on validating the technology stack, establishing a working data model, and ensuring the deployment pipeline functions reliably. This foundation can now support rapid iteration as strategic hypotheses are tested and refined.

The platform thus serves the broader ICP objective: providing Re-New with infrastructure to measure progress toward Product-Market Fit while keeping implementation lean enough to pivot as learnings emerge.

Visual Roadmaps

ICP 2.0 Overall Timeline

Platform Status Summary (As of Jan 19)

RE-NEW PLATFORM V1.0 STATUS As of January 19, 2026		
COMPONENT	STATUS	NOTES
Platform Infrastructure	[██████████] DONE	
Authentication System	[██████████] DONE	
Dashboard & CRM	[██████████] DONE	
Scoring System	[██████████] DONE	
Intake Form (tech ready)	[██████████] 80%	Waiting for questions
Email System (tech ready)	[██████████] 80%	Waiting for templates
Custom URL	[░░░░░░░░] 0%	Pending DNS access
Flatchr Migration	[░░░░░░░░] 0%	Scheduled Feb 3
OVERALL PROGRESS: [██████████░░░░░░░░] 75% (36/48 tasks)		
BLOCKERS: Content decisions (questionnaire, emails), not code		
NEXT: Founders finalize questionnaire spec by Wed Jan 22
